

1. Show all products that are discontinued but still have units in stock.
2. Find the top 10 most expensive products that are not discontinued.
3. Display customer names along with the number of distinct countries they belong to.
4. Find employees who were hired after 1992 and are older than 50 years (based on birthdate).
5. Show orders that were shipped after the required date.
6. Find the total number of orders placed in each quarter of 1996.
7. Show the average freight cost per shipper for orders shipped to Germany.
8. Find customers who have placed orders in all four years (1996, 1997, 1998).
9. Display product names that contain both 'ch' and 'ee' in their name.
10. Show the total revenue generated from each category in 1997.

11. Find the employee who handled the highest number of orders in 1996.
12. Show all orders where freight is higher than the average freight of all orders.
13. Find products that have never been ordered by customers from France.
14. Display the top 5 customers by total spending in the year 1997.
15. Show the difference between order date and shipped date for all orders (in days).
16. Find customers who placed more than 20 orders but have never ordered 'Chai'.
17. Show the ranking of products based on total units sold across all orders.
18. Find the second highest selling product in each category.
19. Show employees and their manager's name (use self join).
20. Display the running total of freight cost per customer ordered by order date.

21. Find orders that were placed on the last day of any month.
22. Show the percentage contribution of each shipper in total freight charges.
23. Find products whose price is higher than the average price of all products in their category.
24. Display the number of orders placed on weekends vs weekdays.
25. Show customers who have the same city as their ship address in at least 3 orders.
26. Find the month with the highest average order value in 1997.
27. Show the top 3 employees by revenue generated through their orders.
28. Find all products that were supplied by suppliers from the same country as the customer.
29. Display the growth percentage in sales month-over-month for the year 1997.
30. Show orders where the freight cost is more than 10% of the total order value.

31. Find the customer with the highest number of unique products purchased.
32. Show the list of employees who report to the same manager.
33. Find categories where the average unit price is higher than the overall average.
34. Display the cumulative profit (assuming 30% margin) per customer.
35. Show products that have been ordered by more than 50 different customers.
36. Find the most frequently ordered product in each region (based on ship country).
37. Show the rank of each order based on freight cost within its ship country.
38. Find customers who placed orders in January but not in December of the same year.
39. Display the total discount given per category.
40. Show the top 5 cities with highest number of orders but lowest average freight.

41. Find orders that were delayed by more than 10 days.
42. Show the percentage of orders shipped by each shipper per year.
43. Find employees who have not handled any order in 1998.
44. Display products that were reordered (units on order > 0) but are discontinued.
45. Show the average time gap between consecutive orders for each customer.
46. Find the product with the highest variance in unit price across different orders.
47. Show a list of customers who only buy from one category.
48. Display the top 10 orders with highest (freight / order value) ratio.
49. Find how many customers have placed orders worth more than \$10,000 in total.
50. Show the distribution of order values in 4 buckets (0-500, 501-2000, etc.).

51. Find suppliers who supply more than 5 products that are currently in stock.
52. Show the month-wise comparison of total sales between 1996 and 1997.
53. Display customers who have increased their spending from 1996 to 1997.
54. Find the least profitable category after deducting 15% handling cost.
55. Show the running total of quantity sold for each product.
56. Find orders where multiple products from the same category were purchased.
57. Display the top 5 products with highest profit margin per unit.
58. Show employees who handled orders from more than 10 different countries.
59. Find the correlation trend between discount and quantity ordered.
60. Show customers who have never ordered from 'Beverages' category.

61. Display the 3rd highest order value for each customer.
62. Find the average number of days between order placement and shipping per shipper.
63. Show products that were ordered in every quarter of 1997.
64. Find the customer with the most consistent order value (lowest variance).
65. Display year-wise total orders handled by each employee.
66. Show the percentage of loss-making orders (negative profit not applicable here, but delayed orders).
67. Find the most popular product combination (ordered together) using self join on order\_details.
68. Show the top 10 longest gaps between two consecutive orders for any customer.
69. Display categories with more than 10 products that have zero units on order.
70. Find how many orders were shipped late by more than 7 days in each region.

71. Show the contribution of each employee to total company revenue.
72. Find products whose name starts with a vowel and have been ordered more than 30 times.
73. Display the rank of shippers based on on-time delivery percentage.
74. Show customers who placed orders on the same day they were born (month and day).
75. Find the total revenue generated by each territory (if territories loaded).
76. Show the difference in average order value between weekdays and weekends.
77. Find the top 5 products that contribute to more than 50% of a category's revenue.
78. Display orders where the customer and shipper are from the same country.
79. Show the growth rate of new customers acquired each year.
80. Find products that have the highest number of returns (assuming high discount = return proxy).

81. Display a summary of average, min, and max order value per segment.
82. Show employees who joined before 1993 and have handled more than 100 orders.
83. Find the most delayed order (in days) and the customer associated with it.
84. Show percentage of orders that were shipped within 3 days.
85. Display the top 10 customers with highest lifetime value.
86. Find categories where average discount is higher than overall average discount.
87. Show how many unique suppliers are used per category.
88. Find the customer who has the highest ratio of distinct products to total orders.
89. Display the trend of average freight cost over the years.
90. Show products that were never discontinued but have very low stock.

91. Find the busiest shipping day of the week.
92. Display the top 5 most valuable (high monetary) inactive customers (no order in 1998).
93. Show the impact of employee on order freight cost (average per employee).
94. Find duplicate company names in customers and suppliers combined.
95. Display the total sales value handled by each employee per quarter.
96. Show the percentage of international orders (ship country != customer country).
97. Find the product with the longest time between first and last order.
98. Display customers who ordered all products from a particular category.
99. Show the efficiency of each shipper (average shipping days).
100. Create a final ranking of all customers based on a weighted score of Recency, Frequency, and Monetary value.
